

Special Olympics Selects EPM Live for their '09 Winter Games

Special Olympics Selects EPM Live to Manage and Organize their 2009 World Winter Games

EPM Live, the leading Enterprise SharePoint Project Management solution, announced today that it has been selected as the software solution for the 2009 Special Olympics World Winter Games.

The Special Olympics World Winter Games Committee needed a project management tool that would allow each venue to manage their tasks independently and have the ability to report their project status to one enterprise site. The Special Olympics World Winter Games Committee chose EPM Live because the solution provided the highest level of capability and flexibility, with the greatest ease of use in functionality and deployment. With EPM Live's online Software + Services environment, the solution gave the committee the ability to be up and running within a few business days.

EPM Live empowers organizations to manage their work, how they work. By allowing groups to work in multiple environments at the same time, EPM Live provides complete flexibility by integrating different processes, requirements, and methodologies. EPM Live gives executive level visibility across these sites through enterprise level dashboards, extending the reach of Project Management to provide a complete solution for your entire organization.

J.P. Benlian, Special Olympics World Winter Games Committee Member, said, "The solution came highly recommended from the team we were working with on our technology infrastructure. We are a sunset organization and did not have much time to implement and configure a complicated EPM solution. EPM Live allowed us to add as many users as needed and tailor the solution to our unique needs."
